A dedicated page for product specials and discounts.

CONTACT

A quick platform to contact Monitor Net.

REQUEST A TECHNICIAN

Should you need technical assistance simply request a technical call through your mobile APP.

POWERFUL MN AUTONETICS APP FEATURES

ALARM CONTROL

No more stressful moments when you start doubting, far away from home, whether you armed your security system or not – and if, what now?

With Monitor Net's mobile APP, you can effortlessly view your alarm system's status and further be in full control be it to arm or disarm per partition (area), bypass zones and more.

CCTV AI CONTROL

Apart from your alarm control, this unique feature allows the user to remotely arm or disarm the CCTV Artificial Intelligence intrusion detection platform, be it all cameras or individual cameras.

TRACK DEPENDENTS

It is a natural instinct for parents and spouses to be protective and so normal to sometimes have that uneasy feeling not knowing where the kids or your spouse are especially teenagers going out at night or not knowing if your spouse left work.

Monitor Net's Track Dependent feature allows you to quickly see the whereabouts of the loved one's phone without any disturbance to them.

SWITCH CONTROL

This feature has multiple applications, as you can control a variety of switches.

SWITCH LIGHTS

For some, this is a daunting experience as low light or dark spots instinctively heightens the tension and accelerates your heart rate. With Monitor Net's EASC APP you can lower your heart rate and feel more secure when you remotely activate your outside flood lights before arriving home at night.

CONTROL DOORS

How many times did we wish we had a magic wand to open a gate or door as Ernie misplaced his key and arrived home from school, you forgot your domestic worker is working today or out of town cousin, Rachel is standing on the porch. But who needs a key, with an electronic gate/door system you don't need to rush home nor reluctantly give a key to the next-door neighbour, simply open and lock your door using Monitor Net's EASC APP wand.

... and more

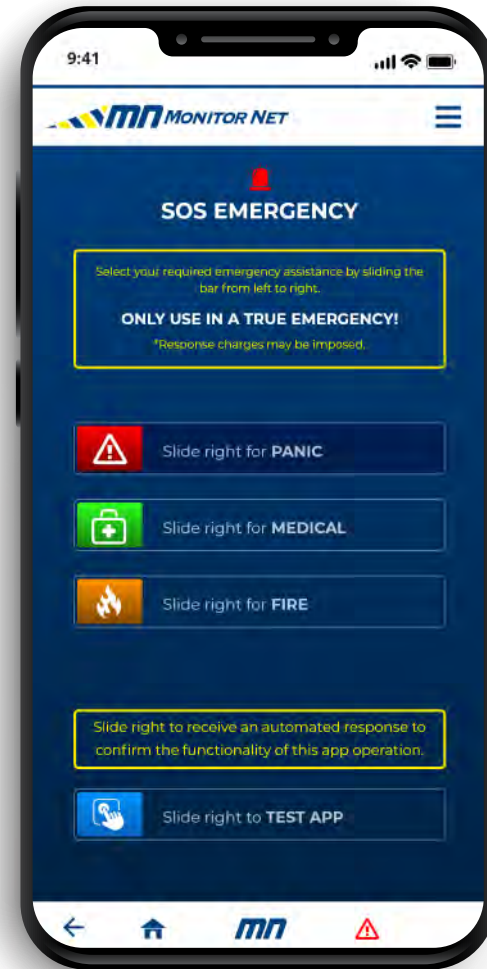

PRACTICAL EXPERIENCE & TECHNOLOGY

SOS

Protect yourself when you have left the safety of your home. Simply press the panic button on our mobile APP and a tactical team will be dispatched to come to your aid in pinpoint accuracy wherever you are - be it traveling home from the office or out shopping.

MEDICAL EMERGENCY

In a medical emergency, simply request medical assistance on our mobile APP. Our qualified EMS team will be immediately alerted to your location. A medical officer will provide telephonic assistance until the team arrives on site.

ALARM ALERTS

Our automated notification will immediately inform you of an alarm activation/s as it occurs with the added benefit of securely canceling the dispatched response unit in the event of accidental activation.

CCTV AI ALERTS

CCTV AI intrusion detection will send an automated video/clip intrusion notification/s as it occurs with the added benefit of securely canceling the dispatched response unit in the event of accidental activation.
